Juan de Lucas Frois

Solutions Developer | Automation (RPA) | Data

Diadema, São Paulo, Brazil | +55 (11) 98683-4909 | contatoJuanFrois@gmail.com | https://www.linkedin.com/in/jfrois/?isSelfProfile=true&locale=en-US | github.com/JFrois | https://jfrois.vercel.app/

Professional Summary

From operations to engineering: I solve complex problems with technology. With a hybrid view of Operations and Tech built at IBM, 99, VOSS Automotive, QuintoAndar and Loft, I identify bottlenecks and build robust tools to eliminate them. I work at the intersection of Software Engineering and Data Intelligence, using Python to build automations (RPA), desktop applications, data pipelines and AI integrations, with results measured in hours saved.

Technical Skills

- Languages: Python (focus on automation and data), SQL, JavaScript, Java
- Automation & RPA: IBM RPA, Selenium WebDriver, Power Automate, Power Apps, CustomTkinter
- Data & BI: PostgreSQL, SQL Server, Pandas, Pandera, SQLAlchemy, ETL, Power BI, Cognos, Grafana, Looker, Streamlit
- AI & Backend: FastMCP (Model Context Protocol), asyncpg, Pydantic, Keycloak (OAuth2/OIDC), Red Hat OpenShift, Podman, Pytest
- Tools & Methods: Git, GitHub, Linux, Jira, Salesforce, Zendesk, Slack, Monday, Agile Methodologies, Design Thinking

Professional Experience

IBM — Data Analysis and Automation Intern | São Paulo, Brazil | April 2026 – Present

- Nexus-Status (MCP server for AI agents): leaders now get metrics instantly, without waiting in the data team's queue; each metric previously took 2 to 4 hours.
- Cognos ETL Engine: data ingestion and quality platform with 7 workflows (HR, Finance and Operations), saving 1 hour per file on every run.
- BI for leadership: built and maintained management dashboards in Power BI, Cognos and Grafana for executive leadership.
- Automation: Python scripts and automations with IBM RPA and Power Automate to eliminate repetitive manual tasks.

99 (DiDi) — CX Product Operations Intern (data focus) | São Paulo, Brazil | December 2025 – April 2026

- Quantitative SQL analyses in the 99Food vertical (Brazil and SSL) to identify root causes of technical friction, supporting engineering in bug mapping and correction.
- Monitored and reported CX OKRs and KPIs for global stakeholders.

- Improved Help Center communication and aligned system configurations with multidisciplinary teams to support the scalability of support channels.

VOSS Automotive Brasil — Development & Innovation Intern | Diadema, Brazil | June 2025 – December 2025

- Aftermarket Opportunities Analysis (Python, Streamlit, SQL): BI tool that cross-references OEM customer data to generate qualified leads; analysis per plant dropped from about 3 hours to 10 to 20 minutes.
- B2B order processing automation: a 3-business-day manual routine (1 to 2 interns, 6 hours per day) reduced to entering a login and password.
- TOTVS Protheus RPA: sales forecast registration cut from 5 minutes to 20 seconds per product.
- VOSS Search tool: inventory lookups that took hours to days now return in seconds.
- The tools built reduced manual processing time by over 90% for the tasks they covered, with Power Automate and Power Apps flows for administrative and factory processes.

Grupo QuintoAndar — Operations Analyst (automation and Python focus) | São Paulo, Brazil | October 2024 – June 2025

- Python scripts that automatically create internal cases and send structured bulk communications via API.
- Technical maintenance of the customer service infrastructure and operational dashboards in Zendesk.

Loft — São Paulo, Brazil | November 2019 – March 2023

Process & Insights Analyst (May 2022 – March 2023)

- Automated contractual data flows that cut operational processing time by 50% and improved contractual efficiency by 10%.
- Data pipelines and dashboards in Salesforce, Looker and Jira, increasing the accuracy of the sector's data analysis by 25%.

Real Estate Legal Analyst (August 2020 – May 2022) and Real Estate Legal Assistant (November 2019 – August 2020)

- Built dashboards for the deeds and registry teams in collaboration with technology teams, and monitored legal processes to prevent missed deadlines.

Highlighted Projects

- Nexus-Status (IBM) | Python 3.13, FastMCP, PostgreSQL, asyncpg, Keycloak, Red Hat OpenShift: MCP server that connects AI agents (Watsonx Orchestrate) to PostgreSQL databases asynchronously and securely, with 31 optimized indexes, parameterized SELECT-only queries, Pydantic validation and OAuth2/OIDC authentication.
- Cognos ETL Engine (IBM) | Python, Streamlit, PostgreSQL, Pandera, SQLAlchemy, Pytest: ingestion of heterogeneous spreadsheets (Excel, XLSB, CSV) with data contracts, atomic

transactions with auto-rollback, audit trail and label-based extraction resilient to layout changes.
- Sales Forecast Registration for TOTVS Protheus | Python, Selenium, CustomTkinter: RPA with a graphical interface, background execution and email notification. github.com/JFrois/Automacao-Cadastro-Previsao-Vendas-Protheus
- B2B Order Processing Automation | Python, CustomTkinter, PDF scraping: desktop app that downloads orders from a portal, extracts the data, consolidates it in Excel and notifies the user by email. github.com/JFrois/Automatizador-de-Ajuste-de-Pedidos
- VOSS Search | Python, CustomTkinter, SQL: centralized inventory search across company databases. github.com/JFrois/Buscador

Academic Background

- Computer Science — FIAP (expected completion: December 2028)
- Systems Analysis and Development — UNINTER (completed in December 2024)

Certifications

- Python: Applying Object-Oriented Programming
- SQL
- Agile Explorer
- User Experience
- Git and GitHub Basics

Languages

- Portuguese: native
- English: advanced
